Continuation of 3. NOTE: The amending of claim 1 changes the scope of the claim to a species in which was not originally claimed.

Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that a restriction should have been issued prior to the final rejection. The examiner disagrees. The applicant presented new species in which no claims where generic thereto. The addition of another species after the first office action without the species being gerenic to a pre-existing claim is an attempt to shift the invention. Furthermore, applicant has now amended claim 1 to recite the inner cover being opaque and the outer cover being trnaslucent. If the applicant wants to admit the coloring of the layers are obvious variants the applicant should say such, otherwise, the claim are to be treated as species being distinct. For what the specification reveals, having a clear cover produces a shadow effect with the dimples and having a transplarent cover creates a coloring effect. In reference to Sullivan, the claim did not require the outer cover to be transparent only the inner cover wherein as it was noted that ionomer is inherently colorless. Sullivan et al. also noted that pigment, dyes, etc. may be added to the cover. An artisan ordinally skilled in the art would have assumed the colored layer to be the outer cover merely because it is common within the art.. Further, the applicant does not deter from the outer layer being opaque as set forth in the paragraph bridging pages 20 and 21 of the applicant's specification. Having less pigment is only an economical benefit. For theses reason, it is seen that the restriction and the rejection set forth in the previous office action were proper.
